1. CABLING

The cabling infrastructure shall be Category 6 performance products complying with the link and channel performance requirements of ANSI/TIA/EIA 568-B.2.1 – Performance Specification for 4–pair 100 Ohms Category 6 Cabling. The cabling shall have a System Warranty provided from the structured cabling systems Manufacturer and the Contractor shall be responsible for obtaining this certification. After installation the Contractor shall submit all documents to support the warranty in accordance with the manufacturer’s warranty requirements. The system warranty will cover the

components and labor associated with the repair or replacement of any failed segment as a result of a defective product when a valid warranty claim is raised within the warranty period.

Horizontal cabling will consist of data cables specified up-to 250MHz in compliance with ANSI/TIA/EIA 568-B.2.1 specification for CAT6 Cabling Systems. Horizontal data cables would terminate on the rack mounted Category 6 patch panels in the TC. The data cables would be connected to the LAN switches within each TC via factory made Cat6 specification patch cords, neatly routed within cable managers.

Backbone data cable shall consist of 6-core 900 micro meter tight-buffered 50/125 micro meter multimode fibres. The insulation should be suitable for indoor installation and all the fibers shall be terminated whether used or not.

2. INSTALLATION

The contractor workmanship shall meet or exceed the following installation, documentation, component and system industry specifications as listed in Appendix B: Standards. The Core, Distribution and Access switches shall in addition to meeting the specifications stated in the tender document be properly configured for optimal operation, security and fault tolerance.

3. SYSTEM TESTING

3.1. Horizontal Cabling Subsystem

All horizontal cable channels shall be tested end-to end using an automated Category 6 compliant approved tester. The tester must be an approved model as required by the manufacturers of the cabling system for the purpose of extended warranty. A cable channel includes testing from the work area outlet to the patch panel outlets. In the event that a non-standard patch cord is required and supplied, the tested channel needs to include the patch cords as well. The following parameters shall be tested:

I. Wire Map

II. Length

III. Insertion loss

IV. Near End Crosstalk (NEXT)

V. Attenuation-to-crosstalk Ratio (ACR)

VI. Power Sum Attenuation-to-crosstalk Ratio (PSACR)

VII. Power Sum Near End Crosstalk (PSNEXT)

VIII. Equal Level Far End Crosstalk (ELFEXT)

IX. Power Sum Equal Level Far End Crosstalk (PSELFEXT)

- X. Return Loss (RL)
- XI. Propagation Delay
- XII. Delay Skew

3.2. Hardware Equipment

All the Hardware components will be tested for proper functionality.

3.3. User Acceptance Criteria

The user acceptance testing, unit testing, integration shall be undertaken. A deliverable shall be deemed complete and accepted when:

- a. The Unit Tests Scripts have been signed off
- b. The Integration Tests Scripts have been generated and signed off by Vendor and KPLC
- c. User Acceptance Test Script have been generated and signed off
- d. Deliverable Completion Certificate has been issue to the vendor by KPLC.

Project shall be deemed complete when all deliverables have been completed and accepted, and all documentations completed. Project Completion Certificate shall be issued to the vendor when final project report is received and verified.

4. SYSTEM DOCUMENTATION

The following section describes the installation, administration, testing, and as-built documentation required to be maintained by the contractor during the course of the installation and handed over to the corporation at the end of the project.

4.1. Cabling System Labeling

The Contractor shall develop and submit for approval a labeling scheme for the cabling installation. KPLC will agree on a labeling scheme before implementation of the same. The labeling system must conform to the TIA/EIA-606-A standards.

The labeling system shall clearly identify all components of the structured cabling system, i.e. racks, cables, panels, pathways and outlets. The labeling system shall designate the cable origin and destination and a unique identifier for each cable within the system. Racks and patch panels shall be labeled to identity the location within the cabling system infrastructure. All labeling information

shall be recorded on the as-built drawings and all test documentation report shall correspond to the actual labels on the racks, cables, panels and outlets.

The labeling shall be machine generated and printed on appropriate, self-adhesive laminated tapes. Labeling for the faceplates and patch panels shall be one colour preferable white with black print. Patch panel labels shall be placed above each of the output jacks. Label dimensions shall be appropriate in terms of the label size and print size.

4.2. As-Built Drawings

The Contractor shall provide two sets of drawings at the start of the project. One set will be designated at the central location to document all as-built information as it occurs throughout the project. The main set will be maintained by the contractors' foreman on daily bases, and will be available to the technical representatives upon request during the course of the project. Anticipated variation from the main drawing may include such things as cable routing and actual outlet locations. No variation will be allowed to the agreed termination position of horizontal and backbone cables or main pathways, unless approved in writing by KPLC.

The Contractor shall update and submit the main as-built drawing to KPLC as part of the handover process. The contractor shall develop smaller drawings as per as-installed points and terminations relevant to particular horizontal distribution TC. Such drawings shall be submitted within the handover document as well as laminated and affixed to the relevant cabinet for ease of reference. The marked up drawing set will accurately depict the as-built status of the entire system including termination locations, cable routing, and all administration labeling for the cabling system.

4.3. Test Documentation

Test documentation shall be provided within three weeks after the completion of the project. The binders shall be marked and labeled appropriately. The project name and date of completion shall be indicated clearly. The document shall be divided into sections, and resulting pertaining to the relevant floor, location or branch shall be documented as such. Within the horizontal and backbone sections, scanner test results (Category 6), fiber optic attenuation results, OTDR results, and pass results shall be segregated. Test results in each section shall be presented in sequence listed in the administration records.

The test equipment name, manufacturer, model number and calibration date shall be provided. The test document shall detail the test method used and the specific settings of the equipment during the test for cable type etc.

The test documentations shall be generated immediately after the test has been completed indicating the component tested, component type, date when test was carried out, Name and Signature of the party carrying out the tests.

5. WARRANTY AND SERVICES

The Contractor shall provide a system warranty covering the installed systems and equipment against defects in workmanship, components, and performance, and covering follow up support after project completion.

5.1. Installation Warranty

Installation warranty covering cabling system defects against workmanship for a period of one year from the date of completion. A product warranty of not less than five years shall be provided for defects on materials used. The warranty shall cover all labor and materials necessary to correct a failed portion of the system and to re-test the performance within the original installation specification after the repairs are carried out. The cost of warranty is deemed to be included in the contract cost.

6. SYSTEM ACCEPTANCE

Before issuing a completion certificate a final inspection shall be done determine whether all the components meet the standards started in the tender document

The Officer shall perform random tests to validate against submitted results. The contractor shall carry out this verification together with the Officer using the same test parameters. Any significant discrepancies shall be addressed and corrected before final acceptance.

7. TESTS AFTER COMPLETION

7.1. Procedure for Tests after Completion

If Tests after Completion are specified in the Contract, this Clause shall apply. Unless otherwise stated in the Special Conditions, KPLC shall:

- (a) Provide all electricity, equipment, fuel, instruments, labour, materials, and suitably qualified and experienced staff, as are necessary to carry out the Tests after Completion efficiently, and

- (b) Carry out the Tests after Completion in accordance with the manuals supplied by the Contractor [Operation and Maintenance Manuals] and such guidance as the Contractor may be required to give during the course of these Tests; and in the presence of such Contractor's Personnel as either Party may reasonably request.

The Tests after Completion shall be carried out as soon as is reasonably practicable after the Works or Section have been taken over by KPLC. KPLC shall give to the Contractor 7 days' notice of the date after which the Tests after Completion will be carried out. Unless otherwise agreed, these Tests shall be carried out within 14 days after this date, on the day or days determined by KPLC.

If the Contractor does not attend at the time and place agreed, KPLC may proceed with the Tests after Completion, which shall be deemed to have been made in the Contractor's presence, and the Contractor shall accept the readings as accurate.

The results of the Tests after Completion shall be compiled and evaluated by both Parties. Appropriate account shall be taken of the effect of KPLC's prior use of the Works.
