REVISION OF KPLC STANDARDS

In order to keep abreast of progress in the industry, KPLC Standards shall be regularly reviewed. Suggestions for improvements to approved standards, addressed to the Manager, Standards Department, are welcome.

FOREWORD

This Specification has been prepared by the Standards Department and Technical Services Department of The Kenya Power and Lighting Company Plc (KPLC) and it lays down requirements for 36kV Vacuum Circuit Breakers with ganged three pole operating mechanism.

The 36kV Vacuum Circuit Breakers with Ganged three pole operating mechanism are intended for use in the network for switching power transformers, short and long distribution lines, underground cables and for fault current interruption.

Specification in this series are:

- KP1/6C/4/1/TSP/11/004-1: 145kV SF6 Circuit Breakers with single pole operating mechanism.
- KP1/6C/4/1/TSP/11/012-1: 245kV SF6 Circuit Breakers with single pole operating mechanism •
- (iii) KP1/6C/4/1/TSP/11/003: 72.5kV SF6 Circuit Breakers with ganged three pole operating mechanism-

This specification stipulates the minimum requirements for 36kV Vacuum Circuit Breakers with ganged three pole operating mechanism acceptable for use in the Company and it shall be the responsibility of the suppliers and manufacturer to ensure that the offered design is of the highest quality and guarantees excellent service to KPLC, good workmanship and good engineering practice in the manufacture of the 36kV Vacuum Circuit Breakers with Ganged three pole operating mechanism for KPLC.

Users of this KPLC specification are responsible for its correct interpretation and application.

The following are members of the team that developed this specification:

1. SCOPE

This specification covers the requirements, design, test methods, marking and packing of 36kV Vacuum Circuit Breakers with Ganged three pole operating mechanism complete with controls, support structures and ancillary equipment.

2. NORMATIVE REFERENCES

The following standards contain provisions which, through reference in this text, constitute provisions of this specification. For dated editions, the cited edition will apply; for undated editions, the latest edition of the referenced document shall apply.

| IEC 62271-100: | High Voltage Switchgear and Control gear - Part 100: High Voltage Alternating |
|----------------|--|
| | Current Circuit Breakers. |
| IEC 60376: | Specification of technical grade sulfur hexafluoride (SF6) for use in electrical |
| | equipment. |
| IEC/ISO 17025; | General requirements for the competence of testing and calibration laboratories. |
| ISO 1461: | Hot dip galvanized coatings on fabricated iron and steel articles Specifications |
| | and test methods. |
| IEC 60529; | Degrees of protection provided by enclosures (IP Code). |
| IEC 62155: | Hollow pressurized and unpressurized ceramic and glass insulators for use in |
| | electrical equipment with rated voltages greater than 1000 V. |
| BS1363: | 13A plugs socket-outlets adaptors and connections units. |
| ISO 9001:2015 | Quality management systems - Requirements |

3. DEFINITIONS AND ABBREVIATIONS

For the purpose of this specification, the definitions and abbreviations given in the reference standards shall apply together with the following:

- 4.2.1.4 All the three poles shall be interconnected by a suitable shaft, linked to the operating mechanism so that the poles are operated simultaneously.
- 4.2.1.5 The circuit breaker shall be operated by local electrical and remote electrical controls from the circuit breaker mechanism box and the remote control panel respectively.
- 4.2.1.6 The circuit breaker shall use vacuum for electrical interrupting medium and insulation.
- 4.2.1.7 The circuit breaker shall have separate interrupters for each phase with a common drive mechanism actuating the interrupters.
- 4.2.1.8 Insulation creepage distance shall not be less than 31mm per kV of rated voltage between phases.
- 4.2.1.9 The circuit breaker shall be equipped with a trip counter operated by the circuit breaker mechanism.
- 4.2.1.10 The circuit breaker shall be provided with a trip coil and a closing coil.
- 4.2.1.11 The resistance of the circuit breaker primary circuit (contact resistance) shall not exceed the values specified in IEC 62271-100.
- 4.2.1.12 A galvanized steel support structure shall be supplied with the circuit breaker. All the bolts, nuts & fasteners for connecting the circuit breaker onto the support structure shall be provided. All ferrous parts shall be galvanized as per ISO 1461.
- 4.2.1.13 The circuit breaker shall be capable of 10000 mechanical operations.
- 4.2.1.14 One trip coil and one closing coil shall be supplied as mandatory spares for each circuit breaker, free of cost.
- 4.2.1.15 The frame of the circuit breaker shall be provided with a reliable earthing terminal having a clamping screw or bolt for connection to an earthing conductor suitable for specified fault conditions. The diameter of the clamping screw or bolt shall be at least 12 mm. The connecting point shall be marked with the "protective earth" symbol, as indicated by symbol No. 5019 of IEC 60417-1:2000. Parts of metallic enclosures connected to the earthing system may be considered as an earthing conductor.
- 4.2.1.16 One manual spring charging handle shall be supplied as an accessory for each circuit breaker free of cost.

4.2.1.17 VACUUM INTERRUPTER UNIT

- 4.2.1.17.1 The envelope vacuum shall be made of alumina or glass ceramic and must be capable of maintaining the vacuum over a long life of the interrupter at a pressure range from 10⁻⁷ to 10⁻⁵ torr. It shall offer mechanical support for the other components as well as electrical insulation when the contacts are in the open position.
- 4.2.1.17.2 End cups or plates and centre shell shall be made of stainless steel or monel. They shall provide support to other components and must match the thermal expansion of the envelope if a direct seal is made.
- 4.2.1.17.3 Stationary and movable rods shall be made of oxygen-free, high conductivity (OFHC) copper and shall form the main electrical contacts. One shall be fixed while the other moves to separate the contacts.
- 4.2.1.17.4 Metal vapour condensing shields shall be made from OFHC copper, nickel or stainless steel. They shall serve as a condensing surface for the metal vaporized are. They shall be capable of preventing the metal from condensing on the insulating portion of the envelope.
- 4.2.1.17.5 Flexible metallic bellows shall be made of stainless steel or monel. Their design shall permit the motion to be transferred into the interrupter without a loss of vacuum.

4.2.2 OPERATING MECHANISM

- 4.2.2.1 The operating mechanism shall be suitable for mounting at the circuit breaker supporting structure, and below the circuit breaker in a weather-proof, dust-proof, vermin-proof and well ventilated housing. The degree of protection shall be at least IP 54 as per IEC 60529.
- 4.2.2.2 The operating mechanism shall open and close the circuit breaker within the specified opening and closing time of the circuit breaker and in any case, the opening times will be ≤ 50ms and the closing time will be ≤ 100ms, on average.
- 4.2.2.3 The operating mechanism shall after charging, carry out an Open-Close-Open (O-0.3s-CO) sequence with no external power supply to the operating mechanism.
- 4.2.2.4 The circuit breaker shall after a closing operation always be able to trip immediately without intentional time delay.
- 4.2.2.5 Operating mechanism shall be trip free during the entire closing sequence.

- 4.2.2.6 Operating mechanism shall be provided with motor wound spring actuated mechanism with provision for hand charge.
- 4.2.2.7 Motor operating voltage shall be 110 Volts d.c.
- 4.2.2.8 The operating mechanism shall be at ground potential, and shall house the secondary wiring for interface of the circuit breaker with the networks control and protection system.
- 4.2.2.9 A set of at least ten normally closed and ten normally open spare potential free contacts shall be provided for remote electrical indication as well as electrical interlocking and shall be wired to a terminal block in the housing.
- 4.2.2.10 A minimum of twenty (20) spare terminals shall be provided.
- 4.2.2.11 The circuit breaker shall be provided with local/remote selector switch. The selection of local operation shall inhibit the operation of the circuit breaker from any remote source. A spare contact for local selection and remote selection shall be provided on the switch for remote indications.
- 4.2.2.12 The circuit breaker shall be provided with a local switch for Open/Neutral/Close Operation. The Position for Open, Neutral and close positions shall be clearly indicated on the switch.
- 4.2.2.13 Mechanically operated indication to show the status of the circuit breaker position (open/close and springs charged/discharged) shall be provided. "ON" or "I", shall be used for CB closed status and "OFF" or "O" for CB open status.
- 4.2.2.14 The circuit breaker shall be provided with suitable terminals for connecting clamps for up to 3" outside diameter copper or aluminium tubes.
- 4.2.2.15 The circuit breaker shall be provided with means to prevent contact pumping while the closing circuit remains energized, should the circuit breaker either fail to latch or be tripped during closing due to operation of the protective relays.
- 4.2.2.16 An anti-condensation heater of adequate design and with suitable hygrostat and temperature controls shall be provided in the circuit breaker mechanism operating box, to prevent condensation. The anti-condensation heater shall be adequately rated and located in a position that ensure safety of personnel and effectiveness in keeping the whole cubicle dry to prevent condensation. It shall not cause deterioration in the wiring or in operation of the components.

- 4.2.2.17 A cable plate shall be provided at the bottom of the circuit breaker mechanism box. The cable plates shall be factory drilled, but blocked with removable stoppers to ensure integrity of IP degree of enclosure for the mechanism box and central control cabinet. The stoppers shall be easily knocked off at site. These shall be shown in the drawings for approval.
- 4.2.2.18 The circuit breaker mechanism box shall be fitted with suitable lifting lugs for ease of lifting and assembly of the circuit breaker.
- 4.2.2.19 The circuit breaker mechanism box shall be fitted with a 230±10%V AC socket outlet with three square terminals (Live, Neutral and Ground) as per BS 1363 standard. The 230±10%V AC Outlet will be controlled by an embedded ON/OFF switch.
- 4.2.2.20 All terminal blocks used inside the operating mechanism box shall as a minimum comply with IP20 degree on enclosure to ensure adequate personnel safety.
- 4.2.2.21 Wiring of the Mechanism Box shall be done in 2.5 mm² stranded and flexible copper conductors. All wiring connections to the terminal Block will be lugged and labelled using ferrules. The terminal Blocks with be indelibly marked with numbers.
- 4.2.2.22 All doors or shutters which give access to live parts shall be interlocked in such a way that these cannot be opened unless the circuit breaker is in the open position. Other interlocks shall be provided as deemed necessary for safety.
- 4.2.2.23 Painting of the circuit breaker mechanism box shall be such that the paint work shall not wear due to weather conditions and ultra violet radiation during the duration of service.
- 4.2.3 RATINGS
- 4.2.3.1 The guaranteed operating characteristics of the 36kV Vacuum Circuit Breakers with Ganged three pole operating mechanism shall be complied with during tests, with all the features stated in Table 1.

5 TESTS REQUIREMENTS

The 36kV VCB with ganged three pole operating mechanism shall be inspected and tested in accordance with the requirements of IEC 62271-100 and this specification.

6 MARKING AND PACKING

6.1 MARKING

The nameplates of the circuit breaker and its operating devices shall be marked in accordance with clause 5.10 of IEC 62271-100 in English language. All markings shall be indelible and legible. Nameplate and their fixings shall be weatherproof and corrosion proof.

6.2 PACKING

6.2.1 36kV Vacuum circuit breakers with ganged three pole operating mechanism shall be packaged for outdoor storage in tropical conditions defined in clause 4.1

- 6.2.2 A set of five (5) original hard cover installation, operation and maintenance manuals for the circuit breakers shall be supplied with each complete breaker.
- 6.2.3 Recommendations for use, care, storage and routine inspection/testing procedures, all in English language shall be submitted.

6.3 MANUFACTURER'S EXPERIENCE AND CAPACITY

- 6.3.1 The circuit breaker manufacturer shall have a minimum of 25 years' experience in the manufacture of 36kV Vacuum Circuit Breakers with ganged three pole operating mechanism.
- 6.3.2 The circuit breaker on offer shall have been in service and given reliable service for a minimum period of 8 years in at least two (2) power utilities in at least three (3) of the following continents/regions:
 - i) Europe
 - ii) North America
 - iii) Africa
 - iv) Asia or South America

The manufacturer shall provide references to support requirements of this including export records with copy of contractual letters, circuit breaker details and date of sale/export, letter of satisfaction from power utilities.

6.3.3 Circuit breakers brands that have failed in service or mal-operated while in service on the

Kenyan power system shall not be accepted.

6.3.4 The warranty for the offered circuit breaker shall be 5 years from the date of circuit breaker delivery to KPLC store

APPENDICES

- A: TESTS AND INSPECTION (Normative)
- A.1 It shall be the responsibility of the supplier to test or to have all the relevant tests performed.
- A.2 Copies of Type Test Certificates and Type Test Reports for 36kV Vacuum Circuit Breakers with Ganged three pole operating mechanism issued by a third party testing laboratory that is accredited to ISO/IEC 17025 and shall be submitted with the tender for the purpose of technical evaluation. A copy of the accreditation certificate for the testing laboratory shall also be submitted with the tender (all in English Language).

Copies of type test reports to be submitted with the tender for evaluation shall include the following tests in accordance with IEC 62271-100:

- 1. Humidity test

NOTE: Any translations of certificates and test reports into English language shall be signed and stamped by the Testing Authority.

- A.3 Routine and sample test reports for the 36kV vacuum circuit breakers with ganged three pole operating mechanism to be supplied shall be submitted to KPLC before delivery. KPLC Engineers will witness tests at the factory before delivery. Tests to be witnessed by KPLC Engineers at the factory before delivery shall be in accordance with IEC 62271-100 and this specification and shall include the following:
 - a) Dielectric test on main circuit
 - b) Dielectric test on auxiliary and control circuits
 - c) Measurement of the resistance of the main circuit
 - d) Tightness test
 - c) Design and visual checks
 - f) Mechanical operating tests
- A.4 Training on installation and maintenance: The manufacturer shall conduct virtual training on installation, testing and maintenance of the circuit breaker to Ten (10) Kenya Power Engineers and Technicians. Maintenance shall cover both the operating mechanism and the interruption chamber.

A.5 On receipt of the 36kV Vacuum Circuit Breakers with ganged three pole operating mechanism, KPLC will inspect them and may perform any of the relevant tests in order to verify compliance with the specification. The supplier shall replace without charge to KPLC, any 36kV Vacuum Circuit Breakers with Ganged three pole operating mechanism which upon examination, test or use fail to meet any or all of the requirements in the specification.

- B: QUALITY MANAGEMENT SYSTEM (Normative)
- B.1 The supplier shall submit a quality assurance plan (QAP) that will be used to ensure that the 36kV Vacuum Circuit Breakers with Ganged three pole operating mechanism physical properties, tests and documentation, will fulfill the requirements stated in the contract documents, standards, specifications and regulations. The QAP shall be based on and include relevant parts to fulfill the requirements of ISO 9001:2015
- B.2 The Manufacturer's Declaration of Conformity to applicable standards and copies of quality management certifications including copy of valid and relevant ISO 9001:2015 certificate shall be submitted with the tender for evaluation.

C: DOCUMENTATION (Normative)

- C.1 The bidder shall submit its tender complete with technical documents for tender evaluation. The technical documents to be submitted (all in English language) for tender evaluation shall include the following:
 - Fully filled clause by clause guaranteed technical particulars (GTP) signed and stamped by the manufacturer;
 - b) Copies of the Manufacturer's catalogues, brochures, drawings giving all relevant dimensions and technical data;
 - c) References letters to support requirements of clause 6.3.2 including export records with copy of contractual letters, circuit breaker details and date of sale/export, letter of satisfaction from power utilities
 - d) Details of manufacturing capacity;
 - c) Copies of required type test reports by a third party testing laboratory accredited to ISO/IEC 17025.
 - f) Copy of accreditation certificate to ISO/IEC 17025 for the third party testing laboratory;
 - g) Contacts and address of third party testing laboratory;
 - Manufacturers letter of authorization, ISO 9001 certificate and other technical documents required in the tender.

C.2 The successful bidder (supplier) shall submit the following documents/details to The Kenya Power & Lighting Company Plc for approval before manufacture:

- a) Fully filled clause by clause guaranteed technical particulars (GTP) stamped and signed by the manufacturer (these are not the ones submitted with the tender);
- b) Detailed design drawings to be used for manufacture of the 36kV Vacuum Circuit Breakers with Ganged three pole operating mechanism to be manufactured for KPLC;
- c) Quality Assurance Plan (QAP) that will be used to ensure that the design, material; workmanship, tests, service capability, maintenance and documentation will fulfill the requirements stated in the contract documents, standards, specifications and regulations. The QAP shall be based on and include relevant parts to fulfill the requirements of ISO 9001;
- d) Marking details and method to be used in marking the 36kV Vacuum Circuit Breakers with ganged three pole operating mechanism.
- e) Packaging details including packaging materials.
- C.3 Statement of compliance to specification (indicate deviations if any provide supporting documents)

NOTE: The drawings to be submitted by the supplier to KPLC for approval before manufacture shall be in standard format clearly indicating the drawing number, parts list with material details and quantities, standard of manufacture, ratings, approval details and identity of the manufacturer (as per manufacturer's authorization submitted during tendering).

| B.2 | Copy of ISO 9001:2015 Certificate | Provide |
| C | Documentation | |
| C.1 | Documents submitted with tender for evaluation | List |
| C.2 | Documents submitted for approval before manufacture | List |
| C.3 | Statement of compliance to specification (indicate deviations if any & supporting documents) | State compliance |

NOTE:

 Bidders shall give full details of the item(s) on offer as per the specification and applicable standards. The details provided shall conform to the test reports and their certificates, as well as labeled drawings complete with dimensions, catalogues and/or brochures for the purpose of tender evaluation.

2) Bidders should note that the above Guaranteed Technical Particulars Schedules must be fully completed and submitted with the bid. Wherever there is conflict between the GTPs and the clauses in the specification, the clauses in the specification take precedence. Failure to complete the schedules shall lead to rejection of the bid.

3) Guaranteed values shall be specified.

* Words like 'agreed', 'confirmed', 'As per KPLC specifications', Yes, etc. shall not be accepted and shall be considered non-responsive.
